

## Appendix 1 bis: Bouquet of Suspended Poppies (mobile)

- 9 to 29 devices
- Deployment, setting: 3 hours. Dismantling: 2 hours
- Floor area: 500 to 1000 m<sup>2</sup>
- Height: 6 m
- Optimum wind strength: from 0 to 1Bft (aesthetic operation of the whole)
- Maximum sustainable wind: 4 Bft (25 Km / h approx)
- Steel stake pushed about 40 cm into the ground

In conditions of insufficient wind or too unstable to expose the installation in its original context (in free flight), the Bouquet of Poppies is installed by fixing on the ground. Each flower is suspended like a mobile on a tubular mat type fishing rod. Maintaining the mast is ensured by a steel bar pushed down at least 40cm into the ground (see diagram).

### Security flight zones

Alain Micquiaux ensures his own anchors and the visual marking of the taut lines. The lines used are made of polyethylene fiber and / or polyester.

The flight zones are free from any other aircraft in order to make the installation readable for the public and to limit lines breaks caused by third parties. If he deems it necessary, the organizer may carry out, at his own expense, the marking of the installation area by stakes of a maximum height of 50 cm (above ground) and white markings (or similar). In untagged areas, each line is marked 70 cm from the ground by a red ribbon.
